RE: Requested Rate Changes – IHBC– Individual – 131469325

Dear Superintendent Vullo, Deputy Superintendent Oechsner, and Assistant Deputy Superintendent Powell:

Health Care for All New York (HCFANY) is a statewide coalition of over 170 organizations dedicated to achieving quality, affordable health coverage for all New Yorkers. HCFANY believes that the public rate review process is a vital consumer protection and is grateful for the opportunity to submit comments on the rate requests submitted for 2019's individual plans. The comments below address concerns about the market as a whole before offering specific comments on the Independent Health Benefits Corporation (IHBC).

I. Market-Wide Comments

A. Action is needed beyond the rate review process to stabilize New York's individual market.

HCFANY is concerned that New York's insurance companies have not successfully controlled costs in the individual market. This year, the carriers seek an average 24 percent rate increase for the 2019 individual market plans.¹ This is the fifth year in a row that the requests have been in the double-digits for the individual market (the previous four years of requests and approved rate changes can be seen in the chart below).

¹ New York State Department of Financial Services, "Proposed 2019 Health Insurance Premium Rates for Individual and Small Group Markets," June 1, 2018, <https://www.dfs.ny.gov/about/press/pr1806011.htm>.

Average Requested and Approved Premium Increases New York's Individual Market 2015-2018 ²			
	Request (Percent)	Approved (Percent)	Percent Change
2018	17.7	14.5	-18.1
2017	19.3	16.6	-13.9
2016	10.4	7.09	-31.8
2015	12.5	5.7	-54.4

Such large increases cause immense hardships for those New Yorkers who receive little or no financial assistance through the NY State of Health Marketplace. Fortunately, most people (59 percent) in the Marketplace do receive help through tax credits that are based on income and grow as prices increase.³ As a result, many are insulated from rate increases. However, 41 percent of people who enrolled in qualified health plans last year received no assistance.⁴ That means they bear the full brunt of any approved premium increases. HCFANY is concerned that approving rate increases so far above the rate of medical inflation will eventually result in enrollment declines and ultimately, an insurance “death spiral” that would catapult premiums beyond the reach of anyone ineligible for assistance.

HCFANY commends the Department for its past efforts to safeguard consumers by reducing the carriers’ average rate increases substantially and urges it to do so again this year. HCFANY’s recommendations for doing so, based on a close reading of the applications, are below. HCFANY additionally asks that the Department and other state leaders take more forceful action outside of the rate review process to stabilize the individual market. High premiums force New Yorkers to choose between health care and necessities like housing and food.⁵ Those choices continue even after someone gains coverage as they make their monthly payments and face increasing cost-sharing.⁶ High premiums also contribute to disparities in well-being between white Americans and others. Adults who are black are much more likely to report an inability to afford basic necessities and health care than adults who are white.⁷ Adults who are black or Hispanic are more likely to have had medical bills turned over to debt collectors than those who are white.⁸

The role of private insurance companies is to pool risk for large numbers of enrollees and negotiate and control prices on their behalves. This year, as in the past, the carriers' applications state that providers are so powerful that this process cannot take place. If this is true, New York should take steps to control prices in the individual market and ensure that people who purchase their own plans have affordable coverage options. Other states have been more successful in keeping prices down in the individual market. For example, Minnesota has implemented a reinsurance program that has resulted in substantial declines in its individual market rates (between 3 and 12 percent).⁹ To control prices in the individual market, New York should consider the following strategies:

1. **Provide premium assistance to people who make above 200 percent of the federal poverty level.** Increased premium assistance would stabilize prices by increasing the size of the risk pool. The more enrollees insurers have, the more they can spread the costs of care across individuals. Ideally, premium assistance would be available to everyone based on income. Encouraging greater participation by some groups could particularly help stabilize the individual market without great cost. Young people, for example, have lower incomes and lower health risks than older people. This means they are more likely to gamble against buying health insurance when dealing with tight budgets. Providing assistance to them would attract more people into our individual market who are lower risk. Insurers would be able to lower costs benefitting many in the market, and young people would have financial security in the event of a health emergency.
2. **Create a drug utilization review board for commercial plans in the individual market similar to the review board that exists for Medicaid.** All of the carriers cite increasing pharmacy prices as a reason for premium increases. For example, HealthNow estimated that medical prices would only increase by 3 percent while pharmacy prices would increase by 9.5 percent. Since so many insurance companies report being outmatched by the pharmaceutical industry, the state should consider intervening. New York's Medicaid program has a Drug Utilization Review Board charged with reviewing clinical information and making recommendations to the Commissioner of Health on drug coverage.¹⁰ The Board's meetings are public, it includes consumers, and the process for nominating members is transparent. Such a Board could ensure that consumers benefit from any rebates and could negotiate for lower pharmacy costs across the market.
3. **Consider a public option such as an Essential Plan Buy-In Program.** The state should allow more people to participate in the Essential Plan as an affordable alternative to the individual market. The Essential Plan provides comprehensive coverage to people who earn between 138 and 200 percent of the federal poverty level.¹¹ Participants at the highest

income level pay only \$20 a month; the cost of their care to the state is minimal because most funding comes from the federal government.¹² New York could allow people with higher incomes to participate in the Essential Plan and offer state subsidies on a sliding scale. At a minimum the state could allow people to pay full-price to participate in the Essential Plan.

Other states have adopted additional measures that may be worth considering, such as the state-based individual coverage mandates recently adopted by New Jersey and Vermont.¹³ Massachusetts has also had an individual mandate in place since 2006.¹⁴ Alternately, New York could seek a 1332 Waiver to establish a reinsurance program along the lines of Minnesota or Alaska.¹⁵ Finally, New York should seriously consider stepping in for the plans and controlling costs more directly through a Maryland-style global payment model.¹⁶ All of these ideas—and more—bear scrutiny in the face of the carriers’ substantial and persistent rate requests and HCFANY urges the Department to establish an Advisory Commission to explore them.

B. Within the rate review process, there are several areas in which we respectfully ask DFS to question insurers’ arguments and impose greater standardization in their requests.

It is evident that federal activity has had a modest impact on New York’s individual market. However, New York State has taken important steps to protect companies from those actions. Those steps included increasing the budget for enrollment assistors in the 2019 budget and opting to maintain the three-month open enrollment period. Additionally, under New York’s strict laws, the carriers face little threat from the federal liberalization of rules governing association health plans.

As a result of the state’s actions and an improved economy, New York’s individual market appears to be stable—not contracting as some carriers claim. The New York State of Heath boasted an overall increase of 4 percent in 2018 enrollment.¹⁷ Although New York’s individual off-exchange marketplace lost enrollment, that appears mostly to be a self-inflicted wound imposed by the actions of one carrier (Empire) which terminated its entire line of

individual market products, causing disruption and panic amongst its 50,000 members.¹⁸ In addition, more New Yorkers may be securing job-based coverage as the economy has improved. Despite these two trends, with a few minor exceptions, nearly all the other plans gained members between 2017 and 2018.

These conditions may not be adequately reflected in the 2019 rate requests. Thus, HCFANY urges the Department to carefully review the carriers' filings in a manner that ensures consistency of rate actions in the following areas: (1) the individual mandate; (2) trend; and (3) administration costs.

1. Increases due to the loss of the mandate should be reasonable and companies with similar risk profiles should receive similar increases.

In 2019, the federal tax penalty for failure to purchase health insurance will be eliminated. The carriers' applications contained varied estimates of the impact of this change with adjustments ranging from 0 to 23 percent. It is plausible that the variation of estimates is due to a carrier's claims experience and premium levels (which make the plan more or less likely to be attractive to someone on the fence about buying a plan). However, this explanation for the diversity of estimates is belied by the fact that carriers with apparently similar risk profiles are asking for vastly different increases. For example, Oscar and Fidelis have similar average claims costs, yet Fidelis asks for a 23 percent increase to make up for losing the mandate while Oscar asks for just 7 percent.

To ensure that all New Yorkers in the individual market are treated fairly and equitably, the Department should consider imposing a cap on the individual adjustment mandate—such as 6 percent, which is the average across all carriers. Those carriers that filed adjustments below 6 percent should be granted the adjustments that they seek (e.g. 0 to 6 percent) and everything above would be reduced to 6 percent.

2. Medical trend estimates vary too much. The state should require a standardized trend, either for the entire state or for regions.

The carriers estimate medical trend between 5.1 and 11.5 percent. While most of the trend requests are within the ranges seen in national estimates (between 4.5 and 8 percent), there are reasons to think that New York's insurers could do a better job of managing these costs.¹⁹ For example, many of New York's plans only offer in-network coverage and those networks are

¹⁸ Empire's 2017 Rate Filing indicates that it had 54,000 members, while its 2019 filings now indicate that it has just 24,000 enrollees. In the interim, Empire retired its individual market offerings and re-filed a new product that was 47 percent more expensive than its predecessor.

increasingly small.²⁰ Most estimates of annual medical trend changes are based on information from the employer market, where networks and benefits are often more expansive. That could be a reason to believe that medical trend should be lower for New York's narrow network plans.

Additionally, it is unclear why carriers in the same state and even in the same regions of the state should report such variation in medical trend. Each year, HCFANY notes in our rate review comments that the carriers do not provide enough information about how they arrive at their trend estimates. While the applications have improved in some ways over the years (for example, fewer redactions), not enough applications include a breakdown of trend into pharmacy versus medical costs. When they do, the carriers rarely provide a narrative explanation of how they manage costs, other than to argue that provider consolidation means they cannot reduce medical spend.

As an intermediate step, the Department should consider requiring carriers to provide better information about their trend estimates. The most helpful way for carriers to provide this information is through a trend breakdown showing the following: inpatient facility care, outpatient facility care, professional services, pharmacy, and other. This is helpful because it is the way that the Milliman Medical Index is reported, which provides a comparison point.²¹ Some carriers did provide that information, including Excellus, Healthfirst, and Independent Health. Additionally, if all carriers provided this information the public would be able to compare their own insurer's performance to a statewide or regional average. HCFANY recommends that either Exhibit 18 or 13a be modified to require this information, or that the Department creates a new exhibit that shows a detailed trend breakdown.

More importantly, the Department should consider adopting a standardized medical and pharmacy trend cap for individual market carriers and requiring them to stay under the state limit. This measure could be implemented on a statewide or regional basis.

3. Administrative costs should be decreasing over time. The Department should consider imposing a cap to guard against extraordinary administrative costs.

Overall plans are asking for slightly lower administrative costs this year (12.1 percent versus 13.9 percent in their requests for 2018). But plans have had six years of experience operating in this market. New York State invests significant resources into marketing qualified health plans and making it easy for people to enroll and renew. The Department should investigate why administrative costs have not decreased more, and closely question plans whose administrative costs are increasing.

The range of administrative costs in the 2019 requests is also very wide, from 8.2 percent to 17 percent. Companies that spend much more of their premium dollars on administrative costs than peers should explain their performance in a detailed manner. Above-average rate increases from companies that also have above-average administrative costs deserve special scrutiny. The

²¹ Girod et al.

Department should also consider imposing a cap on administrative costs that are far above average.

II. Issues Specific to IHBC

Independent Health Benefits Corporation (IHBC) operates in the Buffalo area. It has 5,044 members, an 18.2 percent increase from 2017. IHBC's request for 2019 is an overall weighted average of 21.3 percent. This is larger than the average for the other companies, which was 17.8 percent.²² It follows a 22.3 percent increase for its 2018 rates and a 19.6 percent increase for its 2017 rates. If the 21.3 percent increase is approved, that will mean IHBC's customers have seen their premiums go up by 64 percent in just three years.²³

One positive aspect of IHBC's application is that it is asking for only 9.95 percent for administrative costs, lower than the 12.1 percent average. The administrative costs in its 2019 application are also much lower than the 15.84 percent it put towards administrative costs for 2018. IHBC's application offers relatively thorough information about the components of its medical trend estimate, describing its expectations for price and utilization changes for inpatient, outpatient, professional services, other medical costs, pharmacy, and non-claims costs.

However, given IHBC's history of large rate increases, HCFANY recommends that the Department investigate reducing its 2019 request by scrutinizing its adjustments for: the repeal of the individual mandate penalty; medical cost trend estimates; and profits.

A. IHBC's is requesting a 15.9 percent increase due to the loss of the individual mandate, the second highest estimate in the marketplace.

IHBC claims that the loss of the individual mandate is responsible for 15.9 percent of its requested rate increase. Only one other carrier estimated a larger impact. The average reported by the other carriers was only 5.8 percent (using the adjustments reported on Exhibit 18, line 19).

IHBC provided a lengthy explanation of its process for arriving at this estimate. Other carriers are concerned about losing younger members and seeing their average claims costs increase. IHBC tends to have older members, so its concern is not losing good risk from its pool. Instead it expects to receive smaller payments from the risk adjustment program because, it assumes, the entire pool will be sicker and its group will not vary as much in health status as it has in the past.

²² These are CDPHP, Empire Health Choice, Excellus, Healthfirst PHSP, HIP/Emblem Health, NYQHC/Fidelis, HealthNow, IHBC, MetroPlus, MVP Health Plan, Oscar, and Unitedhealthcare of New York. The applications cover both on-and off-exchange plans for all but MetroPlus and Oscar, which are only offering on-exchange plans. An additional four plans were offering plans off-exchange only, all with under 150 members. Those four plans were not included in the analysis for HCFANY's individual rate comments.

²³ Using Exhibit 13a, IHBC's average per-member per-month rate was \$397.29 in 2016 and would be \$651.01 if granted its full request for next year.

However, this assumption seems entirely speculative, especially in light of the less than dramatic effect from the mandate repeal expected by most competitors. IHBC still expects a large payment from the risk adjustment pool for 2019 – enough to adjust their rates downward by almost 20 percent. In its 2018 rate application, IHBC reduced its rates by 15 percent in response to its expected risk adjustment payment. It is unclear how what appears to be a small change translates to such a big rate increase. Additionally, other carriers that seem to have similar risk profiles are expecting much smaller effects. For example, HealthNow had slightly lower claims costs than IHBC (about \$530 per-member per-month compared to IHBC’s \$570) and like IHBC, receives revenue from the risk adjustment program. HealthNow also operates in the same region as IHBC. However, it requested no increase due to losing the individual mandate.

The Department and the carriers have much more information about the effect of the individual mandate than the public can access or easily analyze. However as discussed above, it is unclear why there is such variation in the carriers’ estimates. As HCFANY recommended in the first section of these comments, the Department should consider capping the increases allowable due to losing the individual mandate at a uniform rate across the market. This would result in a large reduction in IHBC’s requested increase.

B. IHBC’s medical trend is slightly higher than the average for New York and it expects a greater increase in pharmacy spending than the other companies.

IHBC’s medical trend estimate is 8 percent. This is only slightly higher than the average 7.3 percent for the New York carriers. However, it is at the high end of the national estimates cited in the general comments.

One reason may be that IHBC expects pharmacy costs to increase more than other carriers. In its Actuarial Memo, IHBC reports a pharmacy trend of 16.5 percent (a 26.5 percent increase in prices with a small decrease in utilization). IHBC provided a good amount of detail when describing their expectations for medical trend and is to be commended for their transparency. Some carriers neglected to provide as much detail. However, the carriers who did provide the same level of detail estimated lower pharmacy trend, as shown in the following table.

Pharmacy Trend Estimates in 2019 Rate Applications for New York’s Individual Market	
Excellus	10.5%
Healthfirst	11.5%
HealthNow	10.2%
Independent Health	16.5%
MetroPlus	9.52%
MVP	13.2%
NYQHP/Fidelis	10.3%
Oscar	6.7%
Average	10.1%

All of the companies planning to participate in New York’s 2019 individual market cite pharmacy prices as an important cause of increasing premiums. It may be that IHBC’s older

members are more affected by rising pharmacy costs than the relatively healthier members in other plans. However, the Department should ensure that this is the case before approving IHBC's request.

IHBC also had higher trend estimates for inpatient and professional services as seen in the table below. However only three other plans provided sufficient detail to make this comparison.

Medical Trend Details Provided in New York's 2019 Individual Market Rate Applications			
	Inpatient Facility	Outpatient Facility	Professional
Excellus	2.9%	8.1%	1.4%
Healthfirst	3.6%	3.6%	3.6%
Independent Health	9.2%	4.8%	7.4%
Oscar	4.4%	5.7%	4.5%

The Department may have more details than the public about other carriers' trend estimates that were not reported in their Actuarial Memos or Narrative Summaries. If so HCFANY urges it to find out how IHBC compares on inpatient, outpatient, and professional services across the entire marketplace. As discussed in the general comments, HCFANY recommends asking all plans to provide this level of detail in their Actuarial Memos or Narrative Summaries.

C. IHBC is asking for 2 percent profit margin, more than other companies

Only five plans exceeded 1.5 percent profit margin in the 2019 applications, including IHBC. HCFANY asks that the Department consider reducing profit margins to 1.5 percent. It is especially important for a carrier like IHBC that has increased premiums so much over the past few years.

HCFANY urges DFS to carefully review the application submitted by IHBC. Thank you for your attention to these comments. Please contact us with any questions at adunker@cssny.org or 212-614-5312.
