**RE: Requested Rate Changes – Unitedhealthcare– Individual – 131470726**

Dear Superintendent Vullo, Deputy Superintendent Oechsner, and Assistant Deputy Superintendent Powell:

Health Care for All New York (HCFANY) is a statewide coalition of over 170 organizations dedicated to achieving quality, affordable health coverage for all New Yorkers. HCFANY believes that the public rate review process is a vital consumer protection and is grateful for the opportunity to submit comments on the rate requests submitted for 2019's individual plans. The comments below address concerns about the market as a whole before offering specific comments on United's application.

**I. Market-Wide Comments**

**A. Action is needed beyond the rate review process to stabilize New York's individual market.**

HCFANY is concerned that New York's insurance companies have not successfully controlled costs in the individual market. This year, the carriers seek an average 24 percent rate increase for the 2019 individual market plans.<sup>1</sup> This is the fifth year in a row that the requests have been in the double-digits for the individual market (the previous four years of requests and approved rate changes can be seen in the chart below).

---

<sup>1</sup> New York State Department of Financial Services, "Proposed 2019 Health Insurance Premium Rates for Individual and Small Group Markets," June 1, 2018, <https://www.dfs.ny.gov/about/press/pr1806011.htm>.

Average Requested and Approved Premium Increases New York's Individual Market 2015-2018 <sup>2</sup>			
	Request (Percent)	Approved (Percent)	Percent Change
2018	17.7	<b>14.5</b>	-18.1
2017	19.3	<b>16.6</b>	-13.9
2016	10.4	<b>7.09</b>	-31.8
2015	12.5	<b>5.7</b>	-54.4

Such large increases cause immense hardships for those New Yorkers who receive little or no financial assistance through the NY State of Health Marketplace. Fortunately, most people (59 percent) in the Marketplace do receive help through tax credits that are based on income and grow as prices increase.<sup>3</sup> As a result, many are insulated from rate increases. However, 41 percent of people who enrolled in qualified health plans last year received no assistance.<sup>4</sup> That means they bear the full brunt of any approved premium increases. HCFANY is concerned that approving rate increases so far above the rate of medical inflation will eventually result in enrollment declines and ultimately, an insurance “death spiral” that would catapult premiums beyond the reach of anyone ineligible for assistance.

HCFANY commends the Department for its past efforts to safeguard consumers by reducing the carriers’ average rate increases substantially and urges it to do so again this year. HCFANY’s recommendations for doing so, based on a close reading of the applications, are below. HCFANY additionally asks that the Department and other state leaders take more forceful action outside of the rate review process to stabilize the individual market. High premiums force New Yorkers to choose between health care and necessities like housing and food.<sup>5</sup> Those choices continue even after someone gains coverage as they make their monthly payments and face increasing cost-sharing.<sup>6</sup> High premiums also contribute to disparities in well-being between white Americans and others. Adults who are black are much more likely to report an inability to afford basic necessities and health care than adults who are white.<sup>7</sup> Adults who are black or Hispanic are more likely to have had medical bills turned over to debt collectors than those who are white.<sup>8</sup>

<sup>7</sup> Ibid.

<sup>8</sup> NORC and the West Health Institute, page 6.

The role of private insurance companies is to pool risk for large numbers of enrollees and negotiate and control prices on their behalves. This year, as in the past, the carriers' applications state that providers are so powerful that this process cannot take place. If this is true, New York should take steps to control prices in the individual market and ensure that people who purchase their own plans have affordable coverage options. Other states have been more successful in keeping prices down in the individual market. For example, Minnesota has implemented a reinsurance program that has resulted in substantial declines in its individual market rates (between 3 and 12 percent).<sup>9</sup> To control prices in the individual market, New York should consider the following strategies:

1. **Provide premium assistance to people who make above 200 percent of the federal poverty level.** Increased premium assistance would stabilize prices by increasing the size of the risk pool. The more enrollees insurers have, the more they can spread the costs of care across individuals. Ideally, premium assistance would be available to everyone based on income. Encouraging greater participation by some groups could particularly help stabilize the individual market without great cost. Young people, for example, have lower incomes and lower health risks than older people. This means they are more likely to gamble against buying health insurance when dealing with tight budgets. Providing assistance to them would attract more people into our individual market who are lower risk. Insurers would be able to lower costs benefitting many in the market, and young people would have financial security in the event of a health emergency.
2. **Create a drug utilization review board for commercial plans in the individual market similar to the review board that exists for Medicaid.** All of the carriers cite increasing pharmacy prices as a reason for premium increases. For example, HealthNow estimated that medical prices would only increase by 3 percent while pharmacy prices would increase by 9.5 percent. Since so many insurance companies report being outmatched by the pharmaceutical industry, the state should consider intervening. New York's Medicaid program has a Drug Utilization Review Board charged with reviewing clinical information and making recommendations to the Commissioner of Health on drug coverage.<sup>10</sup> The Board's meetings are public, it includes consumers, and the process for nominating members is transparent. Such a Board could ensure that consumers benefit from any rebates and could negotiate for lower pharmacy costs across the market.
3. **Consider a public option such as an Essential Plan Buy-In Program.** The state should allow more people to participate in the Essential Plan as an affordable alternative to the individual market. The Essential Plan provides comprehensive coverage to people who earn between 138 and 200 percent of the federal poverty level.<sup>11</sup> Participants at the highest

income level pay only \$20 a month; the cost of their care to the state is minimal because most funding comes from the federal government.<sup>12</sup> New York could allow people with higher incomes to participate in the Essential Plan and offer state subsidies on a sliding scale. At a minimum the state could allow people to pay full-price to participate in the Essential Plan.

Other states have adopted additional measures that may be worth considering, such as the state-based individual coverage mandates recently adopted by New Jersey and Vermont.<sup>13</sup> Massachusetts has also had an individual mandate in place since 2006.<sup>14</sup> Alternately, New York could seek a 1332 Waiver to establish a reinsurance program along the lines of Minnesota or Alaska.<sup>15</sup> Finally, New York should seriously consider stepping in for the plans and controlling costs more directly through a Maryland-style global payment model.<sup>16</sup> All of these ideas—and more—bear scrutiny in the face of the carriers’ substantial and persistent rate requests and HCFANY urges the Department to establish an Advisory Commission to explore them.

**B. Within the rate review process, there are several areas in which we respectfully ask DFS to question insurers’ arguments and impose greater standardization in their requests.**

It is evident that federal activity has had a modest impact on New York’s individual market. However, New York State has taken important steps to protect companies from those actions. Those steps included increasing the budget for enrollment assistors in the 2019 budget and opting to maintain the three-month open enrollment period. Additionally, under New York’s strict laws, the carriers face little threat from the federal liberalization of rules governing association health plans.

As a result of the state’s actions and an improved economy, New York’s individual market appears to be stable—not contracting as some carriers claim. The New York State of Health boasted an overall increase of 4 percent in 2018 enrollment.<sup>17</sup> Although New York’s individual off-exchange marketplace lost enrollment, that appears mostly to be a self-inflicted wound imposed by the actions of one carrier (Empire) which terminated its entire line of

<sup>17</sup> Burton et al., “What Explains 2018’s Marketplace Enrollment Rates?,” *Robert Wood Johnson Foundation*, June 2018, <https://www.urban.org/research/publication/what-explains-2018s-marketplace-enrollment-rates>.

individual market products, causing disruption and panic amongst its 50,000 members.<sup>18</sup> In addition, more New Yorkers may be securing job-based coverage as the economy has improved. Despite these two trends, with a few minor exceptions, nearly all the other plans gained members between 2017 and 2018.

These conditions may not be adequately reflected in the 2019 rate requests. Thus, HCFANY urges the Department to carefully review the carriers' filings in a manner that ensures consistency of rate actions in the following areas: (1) the individual mandate; (2) trend; and (3) administration costs.

**1. Increases due to the loss of the mandate should be reasonable and companies with similar risk profiles should receive similar increases.**

In 2019, the federal tax penalty for failure to purchase health insurance will be eliminated. The carriers' applications contained varied estimates of the impact of this change with adjustments ranging from 0 to 23 percent. It is plausible that the variation of estimates is due to a carrier's claims experience and premium levels (which make the plan more or less likely to be attractive to someone on the fence about buying a plan). However, this explanation for the diversity of estimates is belied by the fact that carriers with apparently similar risk profiles are asking for vastly different increases. For example, Oscar and Fidelis have similar average claims costs, yet Fidelis asks for a 23 percent increase to make up for losing the mandate while Oscar asks for just 7 percent.

To ensure that all New Yorkers in the individual market are treated fairly and equitably, the Department should consider imposing a cap on the individual adjustment mandate—such as 6 percent, which is the average across all carriers. Those carriers that filed adjustments below 6 percent should be granted the adjustments that they seek (e.g. 0 to 6 percent) and everything above would be reduced to 6 percent.

**2. Medical trend estimates vary too much. The state should require a standardized trend, either for the entire state or for regions.**

The carriers estimate medical trend between 5.1 and 11.5 percent. While most of the trend requests are within the ranges seen in national estimates (between 4.5 and 8 percent), there are reasons to think that New York's insurers could do a better job of managing these costs.<sup>19</sup> For example, many of New York's plans only offer in-network coverage and those networks are

---

<sup>18</sup> Empire's 2017 Rate Filing indicates that it had 54,000 members, while its 2019 filings now indicate that it has just 24,000 enrollees. In the interim, Empire retired its individual market offerings and re-filed a new product that was 47 percent more expensive than its predecessor.

<sup>19</sup> American Academy of Actuaries, "Drivers of 2019 Health Insurance Premium Changes," June 2018, [http://www.actuary.org/files/publications/Premium\\_Drivers\\_2019\\_061318.pdf](http://www.actuary.org/files/publications/Premium_Drivers_2019_061318.pdf); Girod et al., "2018 Milliman Medical Index, May 2018, <http://www.milliman.com/uploadedFiles/insight/Periodicals/mmi/2018-milliman-medical-index.pdf>; and PwC Health Research Institute, "Medical Cost Trend: Behind the numbers 2019," June 2018, <https://www.pwc.com/us/en/health-industries/health-research-institute/assets/pdf/hri-behind-the-numbers-2019.pdf>

increasingly small.<sup>20</sup> Most estimates of annual medical trend changes are based on information from the employer market, where networks and benefits are often more expansive. That could be a reason to believe that medical trend should be lower for New York's narrow network plans.

Additionally, it is unclear why carriers in the same state and even in the same regions of the state should report such variation in medical trend. Each year, HCFANY notes in our rate review comments that the carriers do not provide enough information about how they arrive at their trend estimates. While the applications have improved in some ways over the years (for example, fewer redactions), not enough applications include a breakdown of trend into pharmacy versus medical costs. When they do, the carriers rarely provide a narrative explanation of how they manage costs, other than to argue that provider consolidation means they cannot reduce medical spend.

As an intermediate step, the Department should consider requiring carriers to provide better information about their trend estimates. The most helpful way for carriers to provide this information is through a trend breakdown showing the following: inpatient facility care, outpatient facility care, professional services, pharmacy, and other. This is helpful because it is the way that the Milliman Medical Index is reported, which provides a comparison point.<sup>21</sup> Some carriers did provide that information, including Excellus, Healthfirst, and Independent Health. Additionally, if all carriers provided this information the public would be able to compare their own insurer's performance to a statewide or regional average. HCFANY recommends that either Exhibit 18 or 13a be modified to require this information, or that the Department creates a new exhibit that shows a detailed trend breakdown.

More importantly, the Department should consider adopting a standardized medical and pharmacy trend cap for individual market carriers and requiring them to stay under the state limit. This measure could be implemented on a statewide or regional basis.

### **3. Administrative costs should be decreasing over time. The Department should consider imposing a cap to guard against extraordinary administrative costs.**

Overall plans are asking for slightly lower administrative costs this year (12.1 percent versus 13.9 percent in their requests for 2018). But plans have had six years of experience operating in this market. New York State invests significant resources into marketing qualified health plans and making it easy for people to enroll and renew. The Department should investigate why administrative costs have not decreased more, and closely question plans whose administrative costs are increasing.

The range of administrative costs in the 2019 requests is also very wide, from 8.2 percent to 17 percent. Companies that spend much more of their premium dollars on administrative costs than peers should explain their performance in a detailed manner. Above-average rate increases from companies that also have above-average administrative costs deserve special scrutiny. The

<sup>21</sup> Girod et al.

Department should also consider imposing a cap on administrative costs that are far above average.

## **II. Issues Specific to United**

Unitedhealthcare of New York Inc. (United) has 6,858 members in 2018, an 11.7 percent increase over 2017. It operates in the Mid-Hudson, New York City, and Long Island regions. United is on average the most expensive option in the state. It also has by far the highest claims cost and typically receives one of the highest payments from the risk adjustment pool as a result.

United is asking for a 23.6 percent weighted average increase for 2019. United's request is much higher than the 17.8 percent overall average request for the plans participating in the New York State of Health.<sup>22</sup> It also follows several years of high rate increases. If the request is approved, their customers will have experienced a 76.4 percent increase in their premiums over three years.

It is difficult for the public to understand United's large requests because each year its applications provide little concrete information. In previous years, HCFANY raised this issue with the Department as a problem affecting most of the applications. Most carriers have significantly improved. United is an exception. Areas of concern that HCFANY was able to identify include its administrative costs, medical claims trend, profit margins, and low aspirations for its medical loss ratio. However HCFANY also asks that the Department take special care in reviewing information about United's request that may not be easily accessible to the public. The public is relying on the Department to catch issues that were not apparent from United's application.

### **A. United has the second highest administrative costs in the individual market.**

United's requested administrative costs adjustment of 15.6 percent is much higher than the New York's individual market average of 12.1 percent. While United does seek lower administrative costs than it did last year (19.2 percent), it offers no information in the application about why its administrative costs should remain so high.

It is possible that some of United's administrative costs are spent on inappropriate claim denials: 53 percent of the appeals its members file internally are overturned, more than the statewide average.<sup>23</sup> United also has a higher than average rate of grievances ultimately decided in favor of its members or providers than the rest of the state.<sup>24</sup> And United ranks near the

---

<sup>22</sup> These are CDPHP, Empire Health Choice, Excellus, Healthfirst PHSP, HIP/Emblem Health, NYQHC/Fidelis, HealthNow, IHBC, MetroPlus, MVP Health Plan, Oscar, and Unitedhealthcare of New York. The applications cover both on-and off-exchange plans for all but MetroPlus and Oscar, which are only offering on-exchange plans. An additional four plans were offering plans off-exchange only, all with under 150 members. Those four plans were not included in the analysis for HCFANY's individual rate comments.

<sup>23</sup> New York State Department of Financial Services, "New York Consumer Guide to Health Insurance Companies," page 15, [https://www.dfs.ny.gov/consumer/health/cg\\_health\\_2017.pdf](https://www.dfs.ny.gov/consumer/health/cg_health_2017.pdf).

<sup>24</sup> New York State Department of Financial Services, page 25.

bottom in the Department's overall complaint rankings.<sup>25</sup> The Department should consider requiring United to improve its market conduct to reduce administrative expenditure, which would also have the effect of providing more medical care at a lower premium rate for its members.

The Department has lowered United's administrative costs in the past. HCFANY urges it to consider taking this step again.

**B. United's estimate for medical claims trend is the second highest and it provides no explanation for its failure to control costs.**

United's medical trend estimates have been higher than average for several years in a row. For 2019, the average medical claims trend estimate was 7.3 percent. United estimates a trend of 10.4 percent, much higher than the national average.

United offers little detail about how it arrived at its trend estimate. Some of the carriers provided breakdowns that showed the differences between trend for inpatient services, outpatient services, professional services, and pharmacy costs. Others provided simpler breakdowns of just medical costs and pharmacy costs. United's Narrative Summary and Actuarial Memo simply provide one trend number with no information about how it was calculated. Without more information, the public cannot understand which aspects of medical spending are driving United's trend higher. That understanding is important if New York is to develop solutions to high premiums.

As HCFANY recommended in the general comments, the Department should consider standardizing trend across the carriers either regionally or statewide. If it takes that step, United members could potentially benefit from the commensurate rate decrease.

**C. United is asking for the highest profit margin.**

Only five carriers asked for 2 percent of premium or higher as profits, including United's request for 2.4 percent. While United claims its profits were -1.2 percent last year, it kept 5.96 percent of premiums as profit in the year before that. HCFANY asks that the Department limit profit margins to 1.5 percent. This may be especially appropriate for a carrier like United that has a history of large rate increases, high trend, and high administrative costs.

---

<sup>25</sup> New York State Department of Financial Services, page 59.

HCFANY urges DFS to carefully review the application submitted by United. Thank you for your attention to these comments. Please contact us with any questions at [adunker@cssny.org](mailto:adunker@cssny.org) or 212-614-5312.
