Re: Requested Rate Changes – Oscar Insurance Corporation – Individual On-Exchange

Dear Superintendent Lawsky and Mr. Lovejoy,

Health Care for All New York ("HCFANY") submits the following comments relating to the proposed average rate increase of 4.8% for its individual market plans, filed by Oscar Insurance Corporation (collectively, "Oscar") with the New York State Department of Financial Services (DFS) for the 2015 plan year.[1] HCFANY is a coalition of more than 160 consumer and small business health advocacy organizations dedicated to securing affordable, comprehensive, and high-quality health care for all New York residents. HCFANY believes that a robust prior approval process is a vital consumer protection. We commend Oscar's

[1] These rate increase applications were submitted on or about July 2, 2014. Specific references refer to SERFF file number: OHIN-129616646 (hereafter "Rate Application").

proposed average rate increase as among the lowest of its competitors, but nevertheless have some concerns about Oscar's rate application. To this end, we submit the following comments.

I. The Affordable Care Act and New York's Insurance Marketplace

HCFANY urges DFS to consider the New York carriers' proposed rate adjustments in the context of the Affordable Care Act's (ACA) downward pressure on health care costs. Specifically, DFS should assess the impact of the following four factors on individual and small group prices in 2015.

1. Research indicates that the health cost curve is bending.

Lower overall healthcare costs should in turn drive lower premiums. The ACA includes several provisions designed to control spending, such as incentives for new healthcare payment and delivery methods (e.g. value-based payment vs. fee-for-service). For the past decade, data from across the payer spectrum indicates that the rate of health care costs increases is slowing down. This trajectory is likely to continue, as more ACA provisions are solidified.[2] For example, Medicare spending is about $1,000 lower per person than predicted in 2010.[3] PricewaterhouseCoopers projects a medical cost trend of 6.8% in 2015, a slight uptick from the 6.5% predicted in 2014 and down from the 7.5% cost trend predicted in 2013.[4] The 2014 Milliman Medical Index cites a 5.4% growth rate between 2014 and 2013, the lowest since the calculation began in 2012.[5] In short, as described in the table below, annual increases in national health care spending have been under 10% for the past 12 years, and have dropped significantly over time.

Average year-to-year percent increase in National Health Expenditures

2000	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012
6.6%	8.4%	9.7%	8.6%	7.2%	6.8%	6.5%	6.3%	4.7%	3.8%	3.8%	3.6%	3.7%

National research indicates that health insurance premium rates should be consistent with these lower health care costs. While pre-ACA rate increases averaged 10%,[7] the Congressional Budget Office predicts only a 3% rise in Marketplace premiums for 2015.[8] And just last week, California announced an average increase in its Marketplace plans of just 4.2% for 2015.[9] Additionally, the 2014 Trustee Annual Medicare Report predicts that Medicare premiums will hold steady in 2015.[10]

In New York, according to a newly released DFS survey of carriers, New York's insurance plans have been early adopters of many of the ACA-related and other state health care cost reforms initiatives, such as value-based purchasing and patient-centered medical homes.[11] Other reports provide evidence that ACA and New York State delivery system reforms are indeed resulting in cost reductions amongst all payers.[12]

The carriers' rate filings should include adjustments in 2015 which reflect the bending of the health care cost curve and the cumulative efforts of New York's payment reforms. For example, New York's Medicaid Redesign Team initiatives, the State's new Delivery System Reform Incentive Payment Program (DSRIP) and State Health Innovation Plan (SHIP) all employ delivery and payment system reforms that further reduce health care costs for the entire delivery system. Despite likely savings that will be generated from these reforms, only one carrier (Excellus) took a downward adjustment to account for quality improvement and cost containment strategies.[13] We urge the DFS to consider New York carriers' rate proposals in light of the impact of the ACA.

2. The 2015 risk pool is likely to be lower-cost than in 2014, according to the Congressional Budget Office (CBO) and American Academy of Actuaries.[14]

In general, the CBO predicts that the healthier risk pool in 2015 will lower premiums relative to 2014.[15] There are three reasons why New York is particularly likely to experience this downward trend: (1) higher than expected enrollments should result in increased carrier bargaining power; (2) the sickest consumers were more likely to have enrolled in year one; and (3) pent-up demand is likely to be concentrated in year one when more uninsured enrolled.

The first of the three reasons supporting this prediction is that New York carriers have experienced higher than expected enrollments, due to the remarkably successful launch of the NY State of Health Marketplace. In just the first nine months, over 1.2 million New Yorkers have enrolled in Qualified Health Plans and Medicaid Managed Care plans, 84% of whom were previously uninsured.[16] This exceeds the State's *three-year* enrollment goal of 1.1 million enrolled by the end of 2016. Carriers can, and should, leverage this increased customer base to reduce provider and other costs, due to economies of scale and the related increase in bargaining power with health care providers.

The second reason for a lower-cost risk pool in 2015 than in 2014 is that individuals with higher health care needs are more likely to have signed up during the first 2013-2014 open enrollment period.[17] In 2015 and beyond, healthier individuals are more likely to enroll as the individual mandate penalty increases. Therefore, the 2015 risk pool is likely to be healthier than in 2014.

The third reason is that pent-up demand for services from previously uninsured should be concentrated in 2014. In building their 2014 rates, carriers already captured generous pent-up demand adjustments. Indeed, the vast majority (84%) of the over 1.1 million NY State of Health enrollees were uninsured. Moving forward, there is no evidence that the 2015 enrollees are likely to have the same rates of uninsurance. Moreover, the 2015 new entrants likely postponed enrolling in coverage because they are healthier and are less likely to have significant pent-up demand. In short, there is no need for a second year of pent-up demand adjustments and in fact, DFS should secure a

downward adjustment from the carriers for the likely reduction of pent-up demand in 2015 versus 2014.

As noted above, California's regulators leveraged their bargaining power to secure only an average 4.3% rate increase for its Marketplace products, with many consumers seeing price decreases.[18] Accordingly, DFS should review the carriers' rate proposals with the assumption that the 2015 pool should present overall *lower* health risk to insurers than the 2014 pool and a commensurate downward adjustment for lower risk and small pent-up demand should be ascribed to all carriers.

3. New federal risk adjustment, reinsurance and risk corridor programs are designed to defray carrier rate increases related to increased risk and market uncertainty.

The ACA provides new risk adjustment and reinsurance programs to address increased risk by insurers and to assure stable prices for consumers and small employers. The ACA's reinsurance payments, designed to reduce rate increases based on less healthy risk pools, are expected to result in premium decreases between 10 and 15%.[19] Historically, New York's now expired risk adjustment program reduced prices by up to 30%.[20] New York carriers are proposing reinsurance adjustments between 5.75% and 6.10 % on average for on- and off-Marketplace plans, which are inconsistent with these projections and the State's historical experience. Moreover, a review of the New York carrier filings indicates that the majority of carriers in the individual markets proposed no adjustments for the federal risk adjustment program. Finally, none of the carriers have adopted adjustments for the federal risk corridor program, which protects the carriers from unanticipated risk selection. On behalf of New York's consumers and small employers, DFS should ensure that fair adjustments attributable to the impact of the federal risk adjustment, reinsurance, and corridor mechanisms are applied to the carriers in its review.

4. The New York State carriers' rates should reflect a downward adjustment for a decrease in administrative costs.

The NY State of Health Marketplace reduces administrative costs for carriers related to compensation of agents/brokers, enrollment and marketing costs. Only 6% of NY State of Health enrollees sought help from a broker/agent during the first open enrollment period, while 43% got

help from other in-person assistors, and the remainder enrolled via the helpline and the website.[21] Additionally, the individual mandate as well as marketing and outreach efforts by NY State of Health should reduce marketing expenses for carriers.

Each carrier filing must be considered in the context of the above mentioned environmental factors. Our specific concerns about the Oscar application are described below.

II. Specific Issues in Oscar's Rate Application

HCFANY urges the DFS to consider all of the above factors when reviewing Oscar's proposed rates. Further, the DFS should carefully consider Oscar's rate increase proposals in light of its recent entry into New York's individual insurance market, and its early success. Although Oscar was a new addition to the individual insurance market in 2014, it ranked amongst the top ten carriers for enrollment on NY State of Health with 3% of enrollees.[22] Oscar's proposed rate increase is generally in line with national trends, as described on page two above. Additionally, Oscar's estimate for its annual medical trend of 5.7% is commendable relative to filings by its 2015 peers, [23] and is in line with national trends described above. The DFS should keep Oscar's reasonable estimate in mind when reviewing all other carrier applications.

However, Oscar's Actuarial Memorandum and Exhibit 18 (the Index Rate and Plan Level Adjustment Worksheet) raise the following specific concerns.

A. Administrative Expenses

Oscar's adjustment for Administrative Expenses appears confusing, as it provides three different figures at different points in its application. Oscar cites a total administrative cost increase of 12.7% in its Actuarial Memorandum.[24] However, on line 36 of its Exhibit 18, Oscar shows an administrative cost increase of 14.8% to 20.9%, which ranges significantly higher than the carrier average of 16.23% for individual on-Marketplace plans. Exhibit 19 shows a range of administrative cost estimates from 8.7% to 15%. Oscar's Actuarial Memorandum states that the variation in the costs between the plans is due to increased customer contact on certain plans and that "[f]or 2015, Oscar's customer service and medical management contracts will reflect differing levels of service required by product in their fee structure." However, DFS should carefully analyze these varying numbers to ensure that the amounts are correct and that consumers are protected.

[22] 2014 Open Enrollment Report. (June 2014). NY State of Health: The Official Health Plan Marketplace, at 13.
[23] For example, United HealthCare cites a medical trend of 10.9% and Empire cites a trend of 11.3%.
[24] Actuarial Memorandum, at 15.

B. Problems with the Rate Application

Oscar's application as originally posted on the DFS website fails to include Exhibit 18. This Exhibit is a particularly critical component of the filing as it shows how the final rates were reached, and its absence significantly limits the reader's understanding of the application. HCFANY requested Oscar's Exhibit 18 directly from the DFS, and subsequently gained access to this important document. If the original Oscar filing was in fact missing its Exhibit 18, DFS should carefully scrutinize Oscar's full filing to ensure that all other requirements are met prior to the approval of any increase.

III. Conclusion

HCFANY urges the Department to closely review Oscar's application in light of the issues described above. Thank you for your kind attention to our concerns. If you have any questions, please contact Mark Scherzer at mark.scherzer@verizon.net or at (212) 406-9606 or Amanda Peden at apeden@cssny.org or at (212) 614-5541.

Very truly yours,
