RE: Requested Rate Changes – UnitedHealthcare of New York, Inc. – UHLC 131919613

Dear Superintendent Lacewell, Deputy Superintendent Oechsner, and Assistant Deputy Superintendent Powell:

Health Care for All New York (HCFANY) is a statewide coalition of over 170 organizations dedicated to achieving quality, affordable health coverage for all New Yorkers. HCFANY believes that the public rate review process is a vital consumer protection. We are grateful for the opportunity to submit comments and encourage consumers all over New York to do the same each year.

The comments below first address concerns about the market as a whole and second offer comments on the 27.1 percent increase requested by Unitedhealthcare.

I. Market-Wide Conditions

A. State Action is Needed to Continue Increasing Enrollment in the Individual Market

New York has successfully cut its uninsured rate in half since the implementation of the Affordable Care Act (ACA), from 10 percent to 5 percent.[1] This has been in part due to New York's robust embrace of the ACA, including the proactive and aggressive steps taken by State leaders to counter recent federal threats to the individual insurance market. Those steps include codifying the ACA into state law, continual efforts to create a seamless enrollment process, and investment in in-person assistance. Even though enrollment in Qualified Health Plans has

[1] New York State of Health, 2019 Open Enrollment Report, May 2019, https://info.nystateofhealth.ny.gov/sites/default/files/NYSOH%202019%20Open%20Enrollment%20Report_0.pdf.

Health Care For All New York

declined in other states, on the New York Marketplace enrollment in Qualified Health Plans has increased three years in a row.[2] Experts attribute the enrollment increases seen in 2018 and 2019 to this leadership.[3]

Table 1. Total Enrolled in Qualified Health Plans in New York, On- and Off-Exchange[4]				
	On-Exchange	**Off-Exchange**	**Total**	**Percent Change**
2017	223,705	124,004	347,709	
2018	237,191	91,593	328,784	-5.4%
2019	254,634	71,272	325,906	-0.9%

HCFANY urges the state to carefully review the carriers' 2020 submissions and reject any increases based on the alleged degradation of the individual market—which simply did not happen. Each year, the carriers have incorrectly predicted eroding market conditions to justify large rate increases (most recently due to the elimination of the individual mandate tax penalty). And each year, these predictions do not materialize. It is true that there was a slight drop-off in off-exchange enrollment last year. However, an increase in on-exchange enrollment made up the difference, and the actual combined decline was less than one percent.

That said, the State could take actions to grow—not just stabilize—New York's individual market. There are more than a million New Yorkers remaining without health insurance. Table 2 indicates that health coverage is strongly associated with income, indicating that current prices are unaffordable to many New Yorkers.[5] Particularly relevant to enrollment in the individual market is the steep affordability cliff when eligibility for the public Essential Plan ends and consumers must shop for a private Qualified Health Plan. HCFANY commends the New York State of Health for its efforts to keep plans affordable, including the lower deductible that will be available to people who enroll in Silver plans next year. Nevertheless, individuals making just $25,000 a year (just over the Essential Plan cutoff) must pay around $1,800 annually in premiums for a plan with a $1,350 deductible. That's over 12 percent of their gross income before they can use their coverage. This cost is unmanageable for many and simply not worth it for others.

Table 2. New York's Uninsured by Income	
Income as Percent of Federal Poverty Level (Individuals)	**% of NY's Uninsured**
<138% ($17,235)	32%
138% -199% ($17,236 - $24,855)	16%
200 - 399% ($24,856 – $49,835)	32%

400 - 599% (49,835 - $74,815)	12%
Over 600% (Over $74,816)	8%

HCFANY is also concerned about the number of New Yorkers who have insurance but say they still cannot afford care.[6] Insurance degradation is real.[7] In just a few years, premiums and deductibles have increased from 5.5 percent to 7.7 percent of an average New York family's income. And nearly half of New Yorkers who have insurance are going without medications or treatment. If this continues, many New Yorkers may decide to stop buying health insurance altogether.

To address this coverage crisis, New York can follow the lead of California, New Jersey, and other states by taking two important steps beyond the rate review process.

First, New York should create an individual mandate. Any revenue generated by the state individual mandate must be used to either fund robust state premium assistance for people between 200 and 400 percent of the federal poverty level or to provide a down payment for expanding coverage to immigrants. The Urban Institute estimates that an individual mandate would reduce individual market premiums by 10 percent and raise $271 million in New York.[8]

Second, the state should conduct targeted outreach to communities in which people are already eligible for cost-sharing reductions and premium assistance but are not enrolled. There are parts of the state with higher uninsured rates than others – additional outreach and enrollment funding should be targeted towards those communities. These two steps would result in an increase in the number of enrollees into the individual market and thus bring premiums down for both the existing and future enrollees there.

B. New York's Individual Market Carriers Do Not Need Another Big Rate Increase

The Department can also nurture the individual market by rejecting increase requests that are not based on actual market conditions. In their applications for 2020, plans asked for the smallest average increase in several years: 8.4 percent. However, as described in Table 3, this comes after several years of double-digit requests that turned out to be much higher than necessary. The Department has lowered those requests every year, but even those lower increases appear to have been too generous. For example, the average rate increase request in 2018 was 16.6 percent. The Department had lowered the carriers' average requests to 14.5

[8] Linda Blumberg, Matthew Buettgens, and John Holahan, "How Would State-Based Individual Mandates Affect Health Insurance Coverage and Premium Costs?," July 20, 2018, https://www.commonwealthfund.org/publications/fund-reports/2018/jul/state-based-individual-mandate

percent, but that still meant double-digit premium increases for thousands of New Yorkers (see Table 2).

The carriers' argument that they need additional increases to respond to rising medical costs is belied by the fact that their average medical loss ratios for 2018 barely hover above the statutory minimum—and in several cases didn't even make that. The medical loss ratio (MLR) shows what proportion of premiums carriers spend on medical care for their members. In 2018, the average MLR for New York's individual carriers was only 83 percent, barely above the minimum 82 percent required by State law (see Table 3).

Table 3. Individual Market Rate Changes and Medical Loss Ratios, 2016-2019

	Average Request	Average Approved	Number of Carriers	Average Medical Loss Ratio[9]
2015[10]	12.5%	5.7% (-54%)	17	104.4%
2016[11]	10.4%	7.1% (-32%)	17	102.0%
2017[12]	18.0%	16.6% (-8%)	17	95.6%
2018[13]	16.6%	14.5% (-13%)	15	83.0%
2019[14]	24.0%	8.6% (-72%)	14	N/A

Further, carriers in New York have continuously improved their performance in the individual market despite receiving significantly lower rate increases than they argued for. This suggests a habit of overstating their needs. Nationally, 2018 was the most profitable year yet for the individual markets created by the ACA.[15] This looks to be true in New York as well. The requests for 2020 may be smaller than in prior years–but they are still likely too high considering this history of rate inflation and the increasingly strong financial performance of companies participating in New York's individual market.

As described in detail below, the Department should reject premium increases where the carriers fail to control medical costs or their administrative expenses or simply fail to make the statutory minimal payments on medical claims. Moreover, the Department should not provide

[9] MLRs are reported in Exhibit 13a, section D. The averages in Table 3 were calculated using the MLRs submitted in 2018 and 2019 for all carriers. Exhibit 13a provides MLRs for three years beginning with the first year in which data is complete, thus 2019 is not yet available.

"repeater" adjustments annually for one-shot policy changes, such as the elimination of the individual mandate or the cost sharing reduction payments.

1. **Medical trend estimates vary too much, and the State should require a standardized trend for either the entire state or the different rating regions**

New York's carriers need to do a better job controlling medical inflation. Their medical trend estimates in the 2020 rate applications range from 5.2 percent (Oscar) to 9.2 percent (United) with an average of 7 percent. Even when carriers work in the same region, they often estimate different trends. For example, Independent Health and Excellus both operate in Western New York, but estimate medical trends of 5.4 percent and 7.2 percent respectively. Further, for at least the third year in a row, the carriers argue that medical trend in New York will be higher than that expected by experts like Petersen-Kaiser (4.3 percent) or PwC (6 percent).[16] Yet they provide no evidence about why this should be so year after year.

Medical Trend Estimates	
Petersen-Kaiser (2019)	4.3%
Milliman Medical Index[17] (2018)	4.5%
PwC[18] (2020)	6.0%
Segal Company[19] (2019)	6.6%
CVS/Caremark (2019)	8.4%

Another concern is that carriers' predictions of medical trend often exceed actual medical trend.[20] Over time, this means that they have accumulated excessive rates. Even an overestimate of 1 percent every year is integrated into the new base rate and adds up to big increases over time that were not needed to accommodate medical needs.

Consumers, and the State, depend on health insurers to negotiate with providers and pharmaceutical companies to keep prices down. In New York, too many insurers argue that they cannot do this. This indicates that the State should take a more aggressive role in controlling prices. The Department should consider stepping in by imposing a standard medical trend on the entire market of 4.3 percent per the Petersen-Kaiser estimate cited by HealthFirst. Insurers and providers would then negotiate prices with the understanding that overall medical trend must stay at that rate. If this is not possible, the Department could consider imposing regional benchmark medical trends and holding the carriers to them.

2. **Carriers not meeting the state minimum MLR (or in danger of not meeting it) should not receive rate increases**

Underscoring HCFANY's belief that the Department has been too generous with rate requests in the past is that the following four carriers failed to meet the State's minimum MLR of 82 percent in 2018: CDPHP, Excellus, Healthfirst, and Independent Health. A fifth, Fidelis, barely managed to meet the minimum at 82.4 percent. HCFANY has argued in past rate comments that the Department not allow the carriers to treat the minimum as a goal, but instead as an absolute floor to be avoided. Thus in our individual comments, HCFANY has asked that the Department reject an increase—and consider rate cuts—for each of these carriers.

HCFANY also asks that the Department look closely at the track record carriers have in estimating their MLR. For example, in its rate application for 2018 CDPHP said its goal was an MLR of 89.9 percent; its actual MLR (according to its 2020 application) was 81.3 percent. Similarly, Fidelis estimated its MLR would be 90 percent in 2018 when its actual MLR was 82.4 percent. HCFANY respectfully requests that the Department approve smaller increases than requested or even rate decreases for carriers that have a history of overestimating their MLRs.

3. **Carriers that previously received upward adjustments for cost-sharing reductions and losing the individual mandate penalty should not receive duplicative adjustments this year**

None of the carriers asking for rate increases due to the loss of the individual mandate penalty or the federal government's failure to pay for cost-sharing reductions explain why they should get a further adjustment for those factors. When those federal actions were taken, the Department stepped in to help the carriers respond. The adjustments the Department provided at that time are now incorporated into the carriers' base rate. If the carriers have data showing that previous rate adjustments were inadequate, they should provide that in their application. Otherwise, it appears that most of the carriers have already incorporated the conditions of no mandate and no cost-sharing reduction payments into their base rates. HCFANY respectfully urges the Department to reject duplicative rate adjustments.

4. **The Department should look closely at administrative costs for New York's plans and not approve premium increases for the plans with the highest administrative costs**

There is excessive variation in expense ratios within the 2020 applications, which range from 8 percent (MetroPlus) to 15.7 percent (Healthfirst). Health insurers should demonstrate that they can control administrative costs before requesting premium increases, especially those that have expense ratios that are higher than the other carriers like Healthfirst. Further, most of the carriers report that their expense ratios are increasing. Controlling and lowering administrative costs is key to being good shepherds of consumers' premium payments. HCFANY respectfully requests that the Department closely scrutinize carriers that are moving in the wrong direction and consider setting a state goal for administrative costs that is no higher than 10 percent.

II. Specific Issues in United's Application

United has 7,950 members in 2019, an increase of 16 percent over 2018. This is the second year in a row in which United has had a significant increase in members. It has by far the largest average claims costs ($803 per-member per-month compared to an average of $581). As a result of its members high claims costs, United typically receives large payments from the risk adjustment pool and it anticipates the same for 2020.

Historically, United asks for rate adjustments that are much bigger than the adjustments requested by other carriers and this year is no different. Last year, the Department wisely reduced United's request from 23.6 percent to just 1.5 percent. HCFANY asks that the Department make a similarly dramatic reduction this year, with special attention to the carrier's history of large requests, its higher than average claims trend projection, its expense ratio (which includes a higher surplus than most other plans), and its request for a duplicative cost-sharing reduction adjustment.

A. United has a history of making excessive requests for rate increases that are then significantly reduced by the Department and despite these reductions, its margins improve every year

United's request for a 27.1 average rate increase is the highest of all the carriers and is actually three times as high as the average. Even though the Department typically rejects United's requests, their performance improves every year. This can be seen through their MLRs – in 2017, United had an MLR of over 100 percent, indicating the need for a rate increase. While it asked for a 38.5 percent increase, the Department approved an increase of just 20 percent. This was enough to push United's MLR below 100 percent—in 2018 its MLR was 90.9 percent.

For 2020, United's goal MLR is 85.8 percent. Considering that it has previously managed to reduce its MLR despite drastic decreases to its requests, HCFANY asks that the Department carefully review United's claims again this year. United members express disbelief at the request for a rate increase on top of the already expensive premiums they pay. One wrote "I feel defeated by the possibility of an increase in our already exorbitant monthly healthcare premiums. I have a young son and would like continuity with several of our doctors, so we are subscribed to an already very expensive plan. An increase, especially of the magnitude proposed (23.4 percent) makes it an unbelievable financial burden."

United does have a larger network than many other carriers—but its members describe the same problems accessing care as people in other plans: "it is very hard to find a doctor nearby that is willing to take my insurance. I believe in the marketplace but it does not make sense for me to pay such high premiums… when I cannot even find a doctor willing to take my insurance. Please find a way to fix the system and increase the number of doctors in network before allowing an insurance company to raise its premiums."

HCFANY appreciates the efforts the Department has taken to minimize United's requests in the past and asks that it do the same this year to make sure that its members are not driven from the market.

B. United's annual claims trend projection is higher than the other carriers

United expects an annual claims trend of 9.2 percent, higher than the trend estimated by the major actuarial firms and higher than the 7 percent average. It is the highest claims trend expected in New York. The Department should reject any premium increased based on this estimated trend rate. United is by far the largest carrier in the United States with nearly 50 million covered lives.[21] It is also one of the biggest in New York State. Given its relative market share, it should be able to use its market power to secure economies of scale. Only a significant downward adjustment will incentivize United to do just that.

Moreover, there is inadequate information in United's Actuarial Memorandum to explain why it thinks its medical costs will increase so much. The Department should ask for a much more thorough justification for this claims trend or disallow it entirely.

C. United's expense ratio is average but includes greater surplus than most of the other carriers

United's expense ratio has gone down over the past few years and is now average for New York at 12.8 percent. However, its application indicates that it could lower its expense ratio further.

First, it is asking for a profit of 2 percent when most of the other carriers asked for 1.5 or 1 percent. Considering that its members are already paying such high premiums, HCFANY asks that the Department reject this higher profit margin.

Second, the Department's consumer guide shows that a high percentage of appeals filed by United members are reversed—26 percent of appeals filed internally and 37 percent of appeals filed externally.[22] This indicates that the United is rejecting valid claims for needed medical care. This raises administrative costs while causing members to delay care or pay more for care than they should. The Department should take this into account when considering an appropriate expense ratio for United.

Finally, as mentioned above, United's substantial size as one of the biggest carriers in New York State should be leveraged to maximize administrative its efficiency.

D. United is asking for a duplicative rate adjustment for the federal government's failure to fund cost-sharing reductions

[21] Morgan Haefner, "America's largest health insurers in 2018, Becker's Hospital Review, January 10, 2019, https://www.beckershospitalreview.com/payer-issues/america-s-largest-health-insurers-in-2018.html

[22] New York State Department of Financial Services, New York Consumer Guide to Health Insurance 2018 Edition, https://www.dfs.ny.gov/docs/consumer/health/cg_health_2018.pdf.

The Department incorporated a rate adjustment to account for the loss of cost-sharing reductions (CSR) in United's approved 2018 rates. In its 2020 rate application, United seeks another adjustment to account for the loss of the CSR payments. There is no explanation for why the previous increase was insufficient. Moreover, because New York elected to offer the Basic Health Plan option, there are very few people receiving CSRs and those that do are simply receiving a slightly smaller deductible. United's CSR-related request is very small, less than one percent – but small unnecessary increases in premiums compound over time.

The Department should disallow duplicate year-after-year adjustments for the loss of CSRs for all carriers. United's request for an adjustment this year after taking one before could mean that it is building a duplicative rate hike into its base rates for an event that occurred in years past. In addition, three plans (Independent Health, Healthfirst, and Health Plus) do not seek any adjustment for the CSR change that occurred in 2018.

HCFANY therefore strongly urges the Department to disallow any adjustment for loss of CSR payments in 2020 across the entire individual market in general or specifically for United.

Thank you for your attention.

Very truly yours,

Amanda Dunker
Senior Health Policy Associate
